

Abstract

A display and dispensing assembly for use in combination with a freezer cabinet which has an internal temperature T_1 , said display and dispensing assembly comprises

- (a) a housing located externally of the freezer cabinet
- (b) a chamber within the housing in which products can be stored and from which they can be dispensed, said products being stored at a temperature of T_2 which is higher than T_1
- (c) first heat transfer means within the housing
- (d) second heat transfer means intended to be placed in the freezer cabinet
- (e) means for circulating a heat transfer fluid through the first and second heat transfer means.
